

The Enabling City of Montreal

team 89

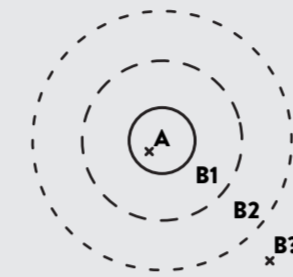

1

Through the virtualization of services and the always quicker, faster state of mobility, technologies are permitting the city to become inherently efficient.

The virtualization

Further accessibility

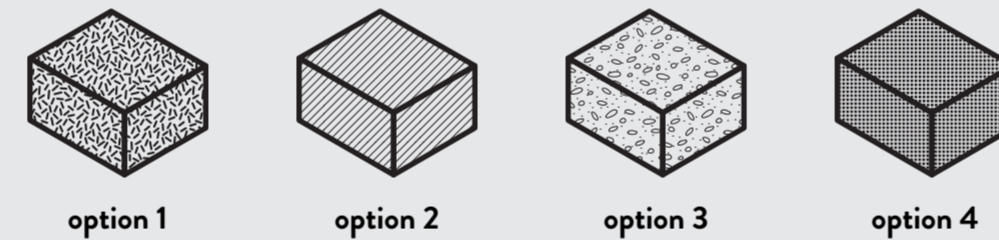

2

Spaces are less and less dedicated to the housing of life's "hardware"; The disintegration of borders will make them more permissive of various experiences: this will be the creation of flexible spaces.

3

This flexibility of spaces will generate a shift in interconnectedness. Hubs will not be constrained to being places as they are now. The citizen will be at the heart of all connected things.

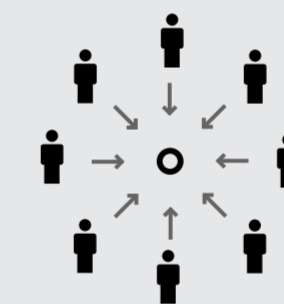

Multiple options for a unique space

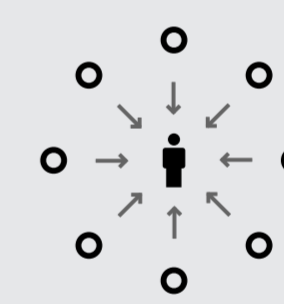

4

The city will pulsate to its evolutive human hubs, creating an extremely human-centric city. Montreal will be constantly reloading itself as its "downtown" is disseminated into multiple high-activity centres.

Before, people had to go to places

The new hub will permit the activities to come to the human

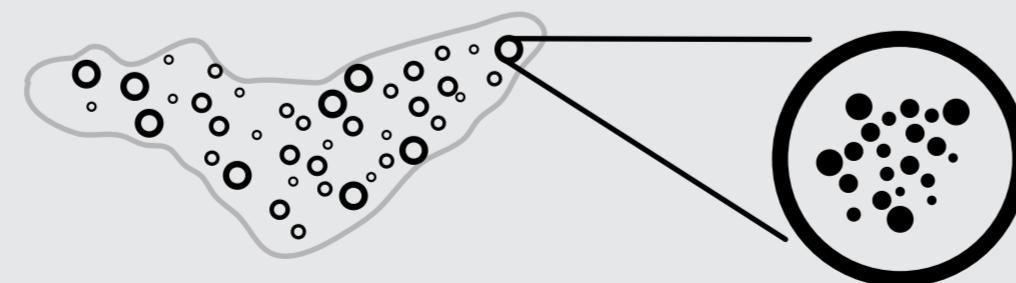

5

As hubs come together they map the ever-growing importance of urban public meeting spaces.

Our vision of Montreal is one that imagines urban togetherness through various citizen-powered public spaces. In a bottom-up kind of way, the Montrealer will enable the city's constant reload.

6

Montreal will be the city of multi-scale reloading spaces built by the moments, experiences, actions, scenarios and conflicts of everyday life.
