

URBAN LEVEE FARM

The project expands necessary infrastructural and environmental improvements to propose a more productive urban and personal life in addition to providing a necessary link between the two sides of the seaway.

- 1- Bay/ Inlet
- 2- Restaurant/ Cuisine
- 3- Boat Locks
- 4- Levee Farm
- 5- Bicycle/ Recreation Path

PROGRAM DIAGRAM

Centuries of wasteful land use, have decimated the ability of natural and urban topography to accommodate changing levels of precipitation and rising sea levels. The project proposes a global system of levees, serving also as a new brand of urban farms at the water and city's edge, preserving local ecologies while protecting cities from emerging dangers.

The Project provides economical multi-use architectural and infrastructural intervention to be deployed at a variety of scales in the new site.
